

Long Range RC module installation
March 2016

**Long Range Transmitter should be installed like this.
Four screws need to be attached to the frame of the
remote to the frame of the long range module.**

Module and very long antenna are inside the white box

A close-up photograph of a black electronic device with a textured surface. A cable with multiple colored wires (red, orange, yellow, green, blue) is being inserted into a port. The cable is curved, and the wires are visible at the end. The device has a small green indicator light and a small yellow button. The word "OPEN" is visible on the device's surface.

**Cable from long range module should be installed
so the orangish yellow wire is the top /first cable in
the plug.**
